Suspect Package and User Training for Operators of Conveyor x-ray scanners

Design

Manufacture

Installation

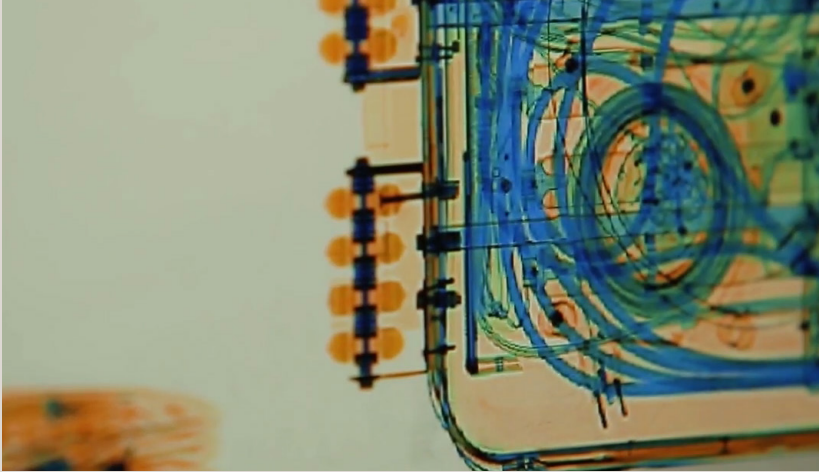

Training

Service

The aim of the course is to offer a basic knowledge of the different types of potential postal, and other threats, to offer an understanding of how to identify them under X-ray, and to leave you feeling more confident about what to do if a threat is detected when scanning.

Operators of conveyor x-ray scanner units can benefit from Todd Research's new e-learning program, designed to assist operators of the units to understand the basics needed to get the most from the technology and maximise resilience.

Todd Research's operator training aims to...

- To explain who, and why groups or individuals might wish to target your organisation, and the different methods of attack they may employ.
- To offer a basic knowledge of different types of potential threats, including I.E.D's, incendiaries, CBR threats and more.
- To offer an understanding of how to identify them under X-ray and how to get the most from the conveyor x-ray scanner.
- To leave your operators feeling more confident about what to do if a threat or contraband is discovered while scanning.

Who is this e-learning aimed at?

This course is tailor made for operators of conveyor x-ray scanners.

What level of training is delivered?

The training offered is an introductory course in postal/baggage screening and offers delegates the chance to learn the basics.

Is this training certificated?

The training consists of 5 Modules. The content offered enables the delegate to take part in a final observation test assessment. They must score 100% in this test to complete the course. If they pass, they will be issued with an online certificate. If they fail, they can retake the test as many times as they please. This course is not CPD certified.

How often should delegates refresh this training?

We recommend this training is undertaken every 2 years.

- Todd Research's e-learning program delivers high quality distance learning that can be experienced on any desktop / hand-held device, PC, Android, IOS.

- Training is hosted in a high quality LMS environment and delivers scoring for each of the five chapters.

- Engaging content that cannot be skipped or bypassed.

- Training culminates in a rigorous observation test which is designed to evaluate the learner's ability to understand the key components of typical threats and distinguish threats from every-day items.

- Training aligns to guidance offered by CPNI (Mail Screening Matters) and PAS97.

- Ensuring that all operators of conveyor x-ray scanners have the basic knowledge needed to use the equipment and form solid foundations in identifying potential threats.

Todd Research Limited Standard Terms & Conditions apply E&OE.

Threat from suspect devices is not exclusive to any one sector, consequently over many years Todd Research has built an enviable reputation partnering with organisations as diverse as Government, Embassies, Global Banking, Pharmaceutical, Oil & Gas, Legal, Media, Facilities Management, Retail and many more.
